

Foundation Stage

Key Vocabulary: take away, difference between, how many are left/ left over? How many are gone? one less, two less, ten less. How many fewer is...than...? How much less is...?, difference.

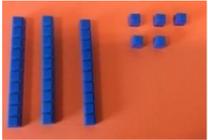

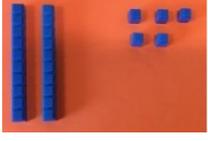

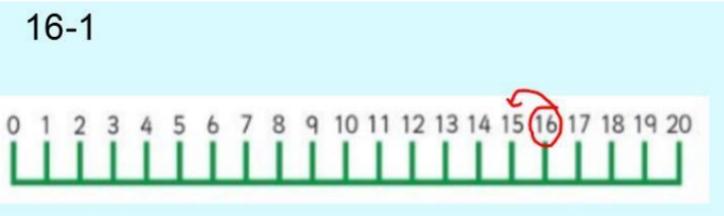

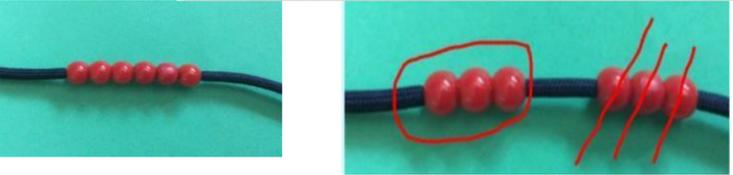

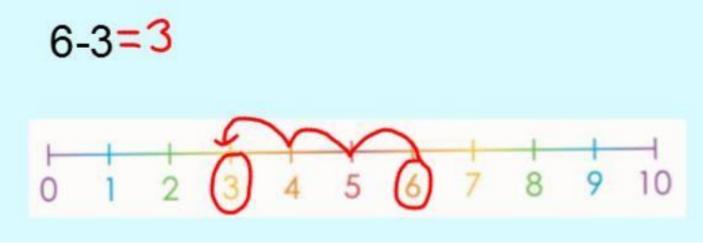

Counting fluency: To count forwards and backwards in steps of 1s, 2s, 5s and 10s.

Objective & Strategy	Concrete	Pictorial	Abstract
<p>To find one less than a number.</p>	<p>Use physical objects to find the solution by taking away one object from the whole.</p> <p>Can you find one less than the number?</p> 	<p>Can you find one less than the number?</p> <p><u>Modelled on a number line</u> Circle the biggest number in the number sentence and count back one on the number line to find the solution.</p> 	<p>Record as a written calculation.</p> <p>$7 - 1 = 6$</p>
<p>Subtract two single digit numbers.</p>	<p>Use a range of physical objects, including number beads. Children will find the solution by making the number first then removing several objects from the whole.</p> <p>$6 - 3 = 3$</p> 	<p><u>Modelled on a number line</u> Circle the biggest number in the number sentence and count back in ones on the number line to find the solution.</p> 	<p>Record as a written calculation.</p> <p>$6 - 3 = 3$</p>

Year 1

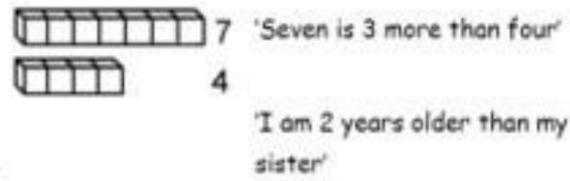

Key Vocabulary: subtract, take away, difference between, how many are left/ left over? How many are gone? One less, two less, ten less. How many fewer is...than...? How much less is...?, difference.

Counting fluency: To count forwards and backwards in steps of 1s, 2s, 5s and 10s.

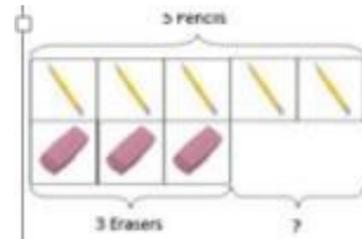

Objective & Strategy	Concrete	Pictorial	Abstract																																																												
<p>To find one less than a number.</p> <p>To find ten less than a number.</p>	<p>Modelled using counters One less than 16 Use physical objects and find the solution (difference) by taking away one object from the group, counting backwards.</p>  <p>Modelled using Base 10 Ten less than 35 Step 1- Make the number using base 10 or concrete resources.</p>  <p>Step 2- Take 10 away. Step 3- Calculate the final answer by counting how many are left (difference).</p> 	<p>Number line Circle the biggest number in the number sentence and count back one on the number line to find the solution (difference).</p> <p>16-1</p>  <p>Modelled using 100 square $35 - 10 = 25$</p> <p>Step 1- Circle the number you are starting at e.g. 35 Step 2- Count back 10. To find the difference between two numbers

Children begin to compare amounts by representing with objects.

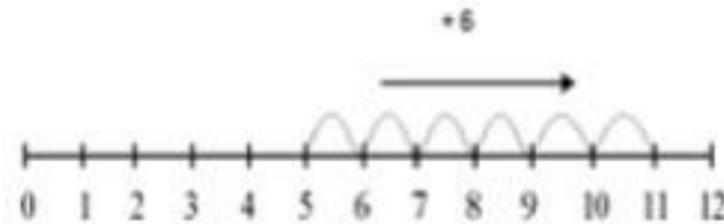

Children use objects to represent problems using the bar model.

Number line- counting on

Find the difference by counting on from the smaller number to the bigger number.

$$11 - 5 = 6$$

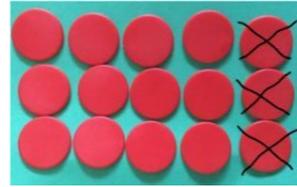

Children apply to word problems.

Hannah has 12 sweets and her sister has 5 sweets. How many more sweets does Hannah have than her sister?

To subtract one digit and two digit numbers to 20, including zero

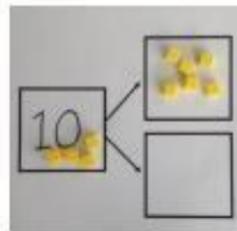

Use a range of physical objects (counters, bead strings) and find a solution (difference) by removing several objects from the group counting backwards.

$15 - 3 = 12$

Use of physical objects to subtract numbers using the part whole model to model.

$10 - 6 = 4$

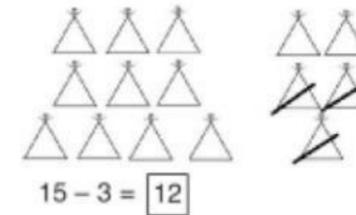

$15 - 0 = 15$

$15 - 3 = 12$

Children represent pictorially by drawing objects and crossing out to show what has been taken away.

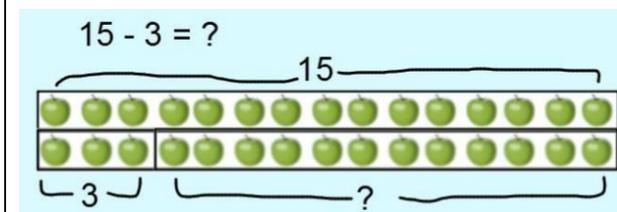

Number line- counting back

Circle the biggest number in the number sentence and count back in ones on the number line to find the difference.

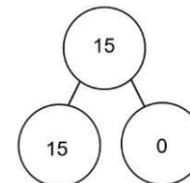

Bar model

Use the bar model to represent the model pictorially.

Part-Whole Model

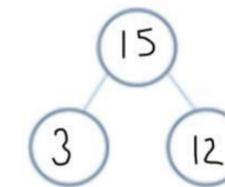

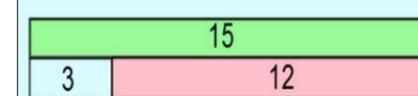

$15 - 0 = 15$

Record as a written calculation.
 $15 - 3 = 12$

Understand subtraction verbally.
Put 15 in your head, count back 3, what number are you at?

Use the bar model or part whole model to find all related addition and subtraction facts

- $15 = 3 + 12$
- $15 = 12 + 3$
- $15 - 3 = 12$
- $15 - 12 = 3$

Record as a written calculation.
 $15 - 0 = 15$

To subtract ones from 10 or 20

Modelled using uni-fix cubes

$10 - 3 = 7$

Step 1- Make the bigger number.

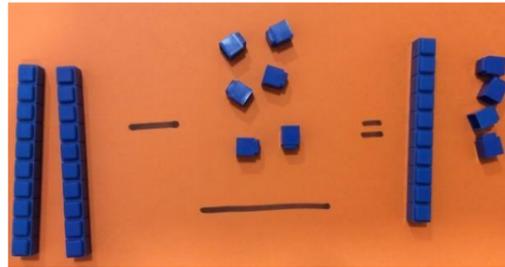

Step 2- take away the smaller number

Step 3- count how many are left to find out the difference.

Modelled using Base 10

$20 - 6 = 14$

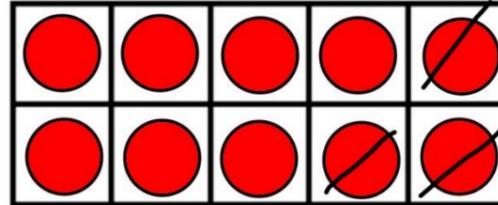

Make the number sentence using Base 10. To find the difference, exchange one ten for 10 ones and subtract the smaller number. Add up how much is left to find the difference.

Modelled using the tens frame

Using a tens frame or pictorial representations, children will count out 10 or 20 counters/pictorial representations and either take them away or cross them out.

$10 - 3 = 7$

Modelled using a pictorial representation

$20 - 6 = 14$

Record as a written calculation.

$10 - 3 = 7$

$20 - 6 = 14$

Year 2

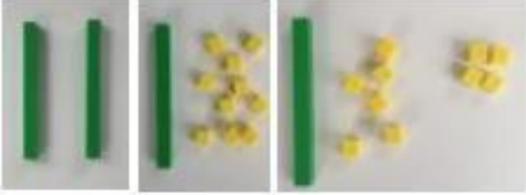

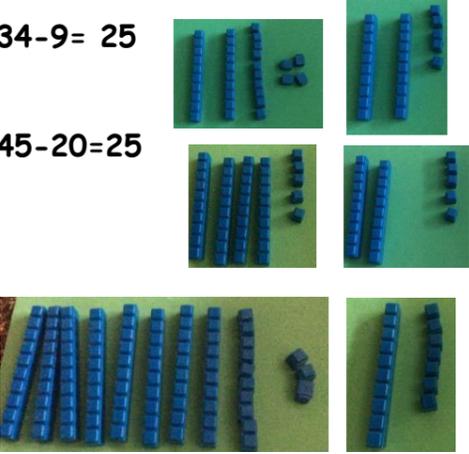

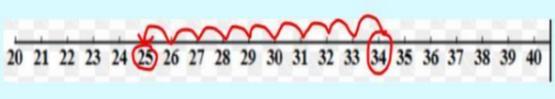

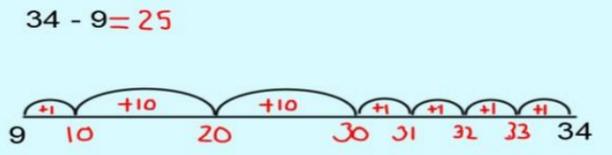

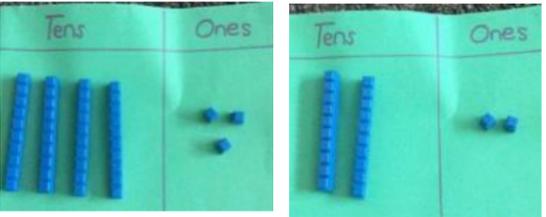

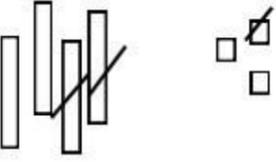

Key Vocabulary: subtract, take away, difference between, how many are left/ left over? How many are gone? one less, two less, ten less, hundred less. How many fewer is...than...? How much less is...? tens boundary, difference.

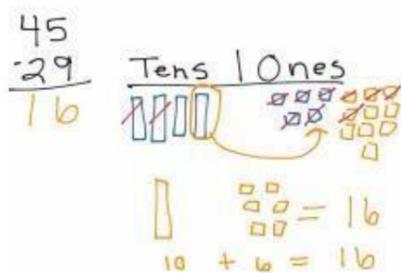

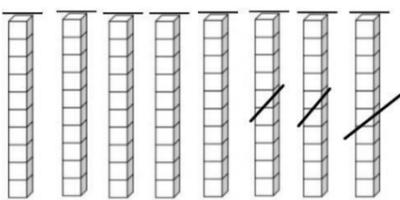

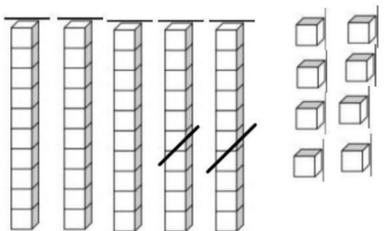

Counting fluency: To count forwards and backwards in steps of 2s, 3s, 4s, 5s and 10s.

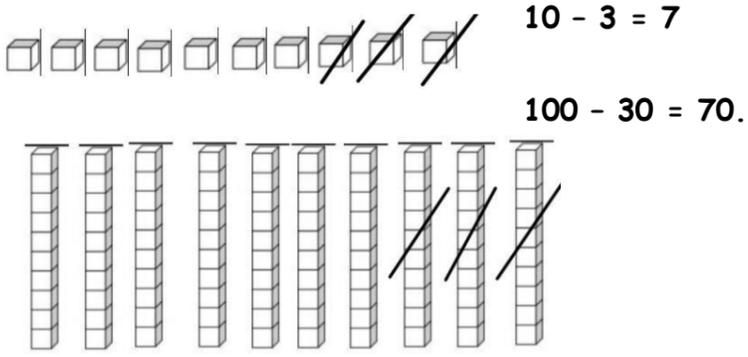

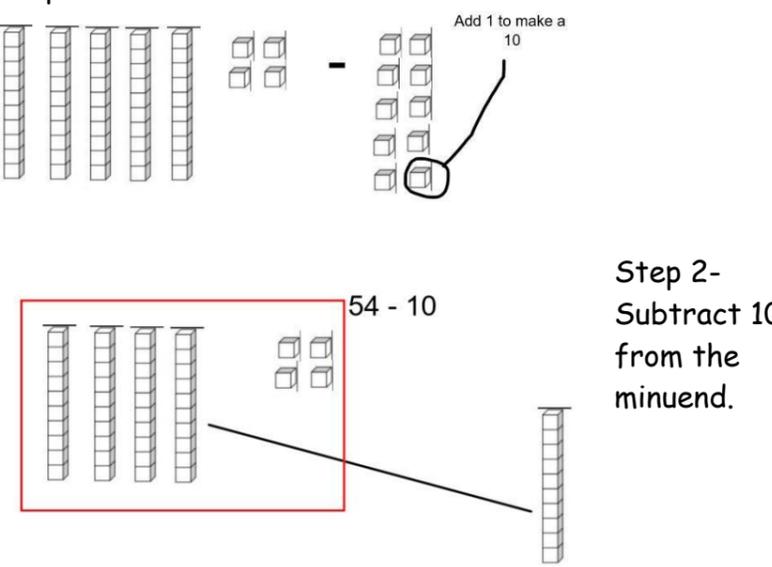

Mental strategies

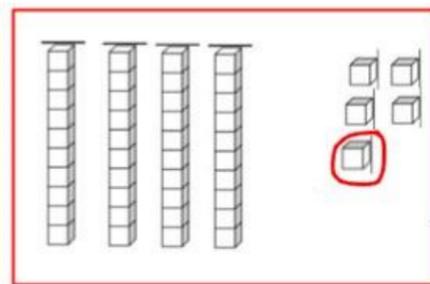

Skill	Strategy
To subtract 9 to a 2-digit number by adjusting.	54-9 Make the number with base ten equipment, then subtract 10. You then need to add 1 because 9 is actually one less than 10. Children will begin to do this mentally without equipment. For 54-9 you would first subtract 10 $54-10 = 44$ then add 1, $44+1=45$ so $54-9=45$.

Year 2 Calculation Methods

Objective & Strategy	Concrete	Pictorial	Abstract
<p>To regroup a ten in to ten ones.</p>	<p>Use base 10 to show how to exchange a ten into ten ones in order to subtract the ones.</p> <p>$20 - 4 = 16$</p> 	<p>Children represent pictorially by drawing objects in groups of ten and crossing out to show what has been taken away.</p> <p>$20 - 4 = 16$</p> 	<p>Record as a written calculation.</p> <p>$20 - 4 = 16$</p>
<p>To subtract numbers using objects, pictures and mentally including:</p> <ul style="list-style-type: none"> -a 2-digit number and ones -a 2-digit number and tens -two 2-digit numbers 	<p>Use the base ten to represent the numbers then use knowledge of exchanging tens for ten ones to subtract the subtrahend.</p> <p>$34 - 9 = 25$</p> <p>$45 - 20 = 25$</p> <p>$93 - 76 = 17$</p> 	<p><u>Modelled using a number line or 100 square</u></p> <p>Count back from largest to smallest number to find the difference.</p> <p>$34 - 9 = 25$</p>  <p>$45 - 20 = 25$</p>  <p>$93 - 76 = 17$</p> 	<p><u>Use of a written method</u></p> <p>Record by drawing their own number line. Children count up from the smallest to largest number. Children would first count on to the next ten and then the rest.</p> <p>$34 - 9 = 25$</p>  <p>$45 - 20 = 25$</p>  <p>$93 - 76 = 17$</p> 
<p>To use partitioning to subtract two digit numbers.</p>	<p>Use base 10 to make the number. Take away the ones then the tens to find the difference.</p> <p>$43 - 21 = 22$</p> 	<p>Children draw pictorial representations and cross off the ones then the tens.</p> <p>$43 - 21 = 22$</p> 	<p><u>Formal Written Method</u></p> <p>Partition each number then subtract the bottom number from the top number, starting with the ones.</p> <p>$43 - 21 = 22$</p> <p>$43 = 40 + 3$</p> <p>$21 = 20 + 1$</p> <p>$20 + 2 = 22$</p>

<p>To use partitioning to subtract two digit numbers with regrouping.</p>	<p>Use base 10 to make the number then regroup by exchanging a ten for ten ones where necessary so that you can subtract the subtrahend.</p>  <p>$45 - 29 = 16$</p>	<p>Children draw pictorial representations to show the regrouping in order to find how many are left.</p> <p>$45 - 29 = 16$</p> 	<p><u>Formal Written Method</u> Partition each number then subtract the bottom number from the top number, starting with the ones. Exchange tens for ones then recombine to find the solution.</p> <p>$45 - 29 = 16$</p> $ \begin{array}{r} 45 = 30 + 15 \\ 29 = 20 + 9 \\ \hline 10 + 6 = 16 \end{array} $
<p>To subtract tens from the tens number up to 100.</p>	<p><u>Modelled using Base 10</u></p> <p>$80 - 30 = 50$</p> <p>Use Base 10 to make the number. Then take away the number of tens required and regroup to find the difference.</p>	<p><u>Modelled using pictorial representations of Base 10</u></p> <p>$80 - 30 = 50$</p>  <p>Children would cross out how many tens they are subtracting and count how many they have left to find the difference.</p>	<p>Record as a written calculation.</p> <p>$80 - 30 = 50$</p>
<p>To subtract tens from a 2-digit number</p>	<p><u>Modelled using Base 10</u></p> <p>$58 - 20 = 28$</p> <p>Use Base 10 to make the number. Then take away the number of tens required and regroup to find the difference.</p>	<p><u>Modelled using pictorial representations of Base 10</u></p> <p>$58 - 20 = 28$</p>  <p>Children would cross out how many tens they are subtracting and count how many they have left to find the difference.</p>	<p>Record as a written calculation.</p> <p>$58 - 20 = 28$</p>

<p>To derive related facts up to 100.</p>	<p>Modelled using Base 10</p> <p>$10 - 3 = 7$</p> <p>$100 - 30 = 70.$</p>	<p>Modelled using pictorial representations of Base 10</p>  <p>$10 - 3 = 7$</p> <p>$100 - 30 = 70.$</p>	<p>Record as a written calculation.</p> <p>$10 - 3 = 7$</p> <p>$100 - 30 = 70.$</p>
<p>To subtract 9 from a 2-digit number by adjusting</p>	<p>Modelled using Base 10</p> <p>$54 - 9 = 63$</p>	<p>Modelled using pictorial representations of Base 10</p> <p>$54 - 9 = 45$</p> <p>Step 1- Add 1 to the 9 to make 10.</p>  <p>Step 2- Subtract 10 from the minuend.</p>	<p>Record as a written calculation.</p> <p>$54 - 9 = 45$</p>

Step 3- Now add the 1
back on to find the
difference.

$$54 - 9 = 45$$

Year 3

Key Vocabulary: subtract, take away, difference between, how many are left/ left over? How many are gone?, one less, two less, ten less, hundred less. How many fewer is...than...? How much less is...? tens boundary, hundreds boundary, difference.

Counting fluency: To count forwards and backwards in steps of 2s, 3s, 4s, 5s, 6s, 8s, 10s and 100s from any given number.

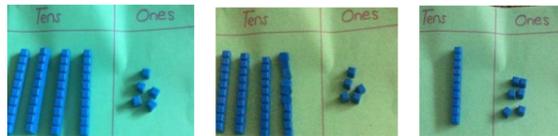

Mental strategies

Skill	Strategy
*Subtract a 3-digit number and ones, including crossing boundaries.	345-3 If the ones in the second number can be taken from the first number then subtract the ones only $345-3= 342$. 432-8 If the ones in the second number are more than the first number then use partitioning to solve. For $432-8$ you would partition 8 into 2 and 6 then $432 - 2= 430-6 = 424$.
*Subtract a 3- digit number and tens including crossing boundaries.	554-40 If the tens in the second number can be taken from the first number then subtract the tens $554-40= 514$ 543-70 If the tens in the second number are more than the first number then use partitioning to solve. For $543-70$ you would partition 70 into 40 and 30 and then $543 - 40 = 503 -30 =473$. Alternatively you could count back in steps of ten from the larger number.
*Subtract a 3-digit number and hundreds including crossing boundaries.	754-400 If the hundreds in the second number can be taken from the first number then subtract the hundreds $754-400= 354$ Alternatively you could count back in steps of one hundred from the larger number.
*Subtract ones from a 3-digit tens number.	340-7 Use knowledge of place value to solve. $10-3= 7$ so $40-7= 33$ then add on the 300. $340-7=333$
* Subtract a 2-digit number from a multiple of 10 including crossing boundaries	90-27 Use knowledge of place value and partitioning to solve. Partition 27 into <u>20</u> and <u>7</u> and subtract each part from 90. $90-20= 70$ and use knowledge of number bonds that $10-7= 3$ so $70-7= 63$ Or use the counting on method to find the difference. If I start with 27 and add 3, I get to 30 then I need to add <u>60</u> more to get to 90 so $90-27= 63$
Subtract a 2-digit number from a 2digit number, including crossing boundaries.	56-32 If the ones and tens can be subtracted without exchange then subtract by partitioning. $56-32$ would be $50-30 = 20$ and $6 - 2 = 4$ then recombine 20 and 4 to make <u>24</u> so $56-32=24$. 45-27 If the ones in the second number is more than the first number then use partitioning to solve. For $45-27$ you could partition 27 into <u>20</u> and <u>7</u> first. Then subtract from the first number. $45-20= 25$ then $25-7=18$ so $45-27=18$. Or use the counting on method to find the difference. If I start with 27 and add <u>3</u> I get to 30 then I need to add <u>10</u> more to get to 40 then another <u>5</u> more to get to 45. I then recombine <u>3</u> with <u>10</u> with <u>5</u> so $45-27= 18$
*Subtract near multiples of 10 and 100 and adjust .	43-9 When subtracting 9 you would <u>subtract 10</u> (1 more than 9) from the first number then <u>add 1</u> because 10 is actually one more than 9. For $43-9$, you would do $43-10=33 +1 = 44$. 543- 99 When subtracting 99 you would <u>subtract 100</u> (1 more than 99) from the first number then <u>add 1</u> because 100 is actually one more than 99. For $543-99$, you would do $543-100=443 +1 = 444$.

To subtract 2 and 3 digit numbers with exchange.

Use base 10 to make the number then regroup by exchanging a ten for ten ones and a hundred for ten tens where necessary so that you can subtract the smaller number.

$45 - 29 = 16$

- Step 1: Make the larger number
- Step 2: Exchange 1 ten for 10 ones.
- Step 3: Subtract two tens and 9 ones.

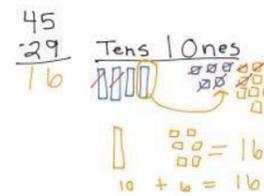

$435 - 117 = 318$

- Step 1: Make the larger number
- Step 2: Exchange 1 ten for 10 ones.
- Step 3: Subtract one hundred, 1 ten and 7 ones.

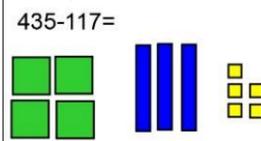

Children draw pictorial representations to show the regrouping in order to find the difference.

$45 - 29 = 16$

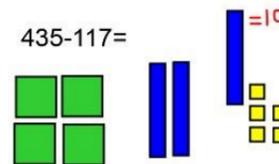

$435 - 117 = 318$

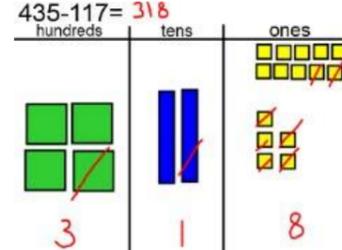

Step 1:

Step 2:

Step 3:

Written Method (expanded)

Partition each number then subtract the bottom number from the top, starting with the ones. Exchange tens for ones then recombine to find the solution.

$45 - 29$

$45 = 40 + 5$
 $29 = 20 + 9$

$10 + 6 = 16$

$435 - 117 = 318$

$435 = 400 + 30 + 5$
 $117 = 100 + 10 + 7$

$300 + 10 + 8 = 318$

Formal Written Method (condensed method)

Children begin to use a condensed columnar method of subtraction with exchange in one column.

$$\begin{array}{r} 45 \\ - 29 \\ \hline 16 \end{array}$$

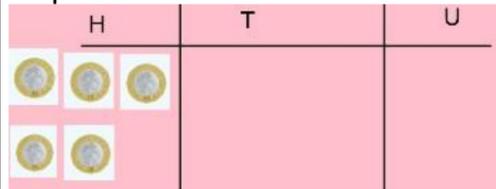

$$\begin{array}{r} 435 \\ - 117 \\ \hline 318 \end{array}$$

To subtract amounts of money to give change.

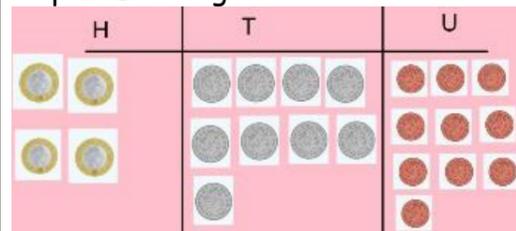

Use base money to make the number then regroup by exchanging a ten for ten ones and a hundred for ten tens where necessary so that you can subtract to find the difference.

£5-2.72

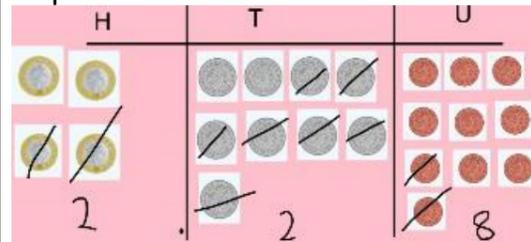

Step 1: Make the Number

Step 2: Exchange

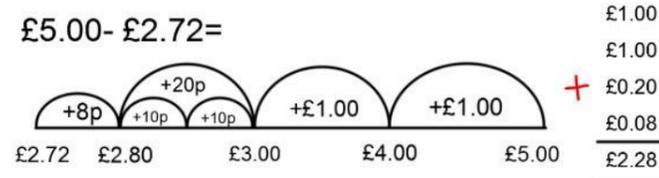

Step 3: Subtract to solve

Children draw pictorial representations to show the regrouping in order to find how many are left, this can be in the form of a number line.

Modelled using a number line.

Children start with the smallest number and add to the nearest tenth, then nearest 1, until you reach the biggest number. Children will then need to add the jumps to calculate the change.

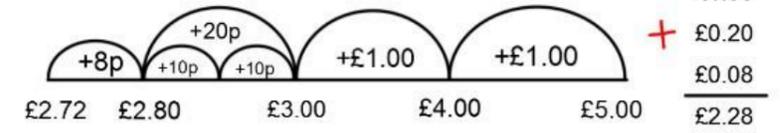

Formal written method

Children complete subtractions involving decimals which are presented in word problem format. They use zeros for place holders and know that decimal points should line up under each other.

I go to the shop with £5.00

I spend £2.72 - how much change do I get?

£5.00 - £2.72 =

Year 4

Key Vocabulary: subtract, take away, difference between, how many are left/ left over? How many are gone? One less, two less, ten less, hundred less. How many fewer is...than...? How much less is...? tens boundary, hundreds boundary, inverse, difference.

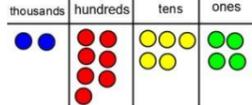

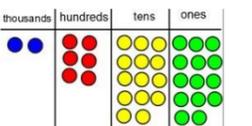

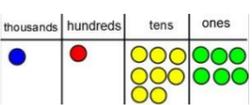

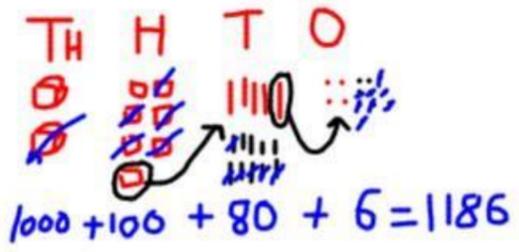

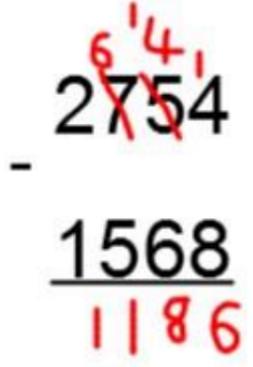

Counting fluency: To count backwards and forwards in steps of 2s, 3s, 4s, 5s, 6s, 7s, 8s, 9s, 10s, 11s, 12s, 100s and 1000s from any given starting number.

Mental strategies

Skill	Strategy
*Subtract a 4-digit number and ones, including crossing boundaries.	3345-3 If the ones in the second number can be taken from the first number then subtract the ones only $3345-3=3342$. 2432-8 If the ones in the second number are more than the first number then use partitioning to solve. For $2432-8$ you would partition 8 into 2 and 6 then $2432-2=430-6=2424$.
*Subtract a 4-digit number and tens including crossing boundaries.	5554-40 If the tens in the second number can be taken from the first number then subtract the tens $5554-40=5514$ 2543-70 If the tens in the second number are more than the first number then use partitioning to solve. For $2543-70$ you would partition 70 into 40 and 30 and then $2543-40=2503-30=2473$. Alternatively you could count back in steps of ten from the first number.
*Subtract a 4-digit number and hundreds including crossing boundaries.	8754-400 If the hundreds in the second number can be taken from the first number then subtract the hundreds $8754-400=8354$ 2543-700 If the hundreds in the second number are more than the first number then use partitioning to solve. For $2543-700$ you would partition 700 into 500 and 200 and then $2543-500=2043-200=1843$. Alternatively you could count back in steps of one hundred from the first number.
*Subtract a 4-digit number and thousands including crossing boundaries.	4527-2000 If the thousands in the second number can be taken from the first number then subtract the thousands $4527-2000=2527$ Alternatively you could count back in steps of one thousand from the minuend.
*Subtract a 3-digit multiple of 10 from a 3-digit number.	345-130 If all the digits on the second number can be subtracted then solve by partitioning. For $345-130$, you would do $300-100=200$, $40-30=10$ and $5-0=5$ then recombine $200+10+5=215$ 546-270 If all or some of the digits in the second number are more than the first number then use partitioning to solve. For $546-270$, you would partition 270 in <u>200</u> and <u>70</u> and so $546-200=346$ then <u>subtract 70</u> to get 276. OR using the counting up method. For $546-270$, start with 270, <u>add 30</u> to get to 300 then <u>add 200</u> to get to 500 then <u>add 46</u> to get to 546. Then recombine $30+200+46=276$.
*Subtract a 3-digit multiple of 10 from a 4 or 4-digit number e.g. $4000-340$.	200-27 Use knowledge of place value and partitioning to solve. Partition 27 into <u>20</u> and <u>7</u> and subtract each part from 200. $200-20=180$ and use knowledge of number bonds that $10-7=3$ so $180-7=173$. Or use the counting on method to find the difference. If I start with 27 and <u>add 3</u> , I get to 30 then I need to <u>add 70</u> more to get to 100 then another <u>100 more</u> to get to 200. I then recombine 3 and 70 and 100 so $200-27=173$.
* Subtract a 2/3-digit number from a 3/2-digit number, including crossing boundaries.	237-24 If the ones and tens can be subtracted without exchange then subtract by partitioning. $237-24$ would be $237-20=217$ and then subtract 4 = 213. 432-171 If the ones or tens in the second number is more than the first number then use partitioning to solve. For $242-171$ you could partition 171 into <u>100</u> , <u>70</u> and <u>1</u> first. Then subtract from the first number. $432-100=332$ then $332-70=262$ then $262-1=261$ so $432-171=261$ Or use the counting on method to find the difference. If I start with 171 and <u>add 29</u> I get to 200 then I need to add 200 more to get to 400 then another 32 more to get to 432. I then recombine 29 with 200 with 32 to get 261 so $432-171=261$

*Subtract near multiples of 10, 100 and 100 then adjust.

543-29 When subtracting 29 you would subtract 30 (1 more than 29) from the first number then add 1 because 30 is actually one more than 29. For 543-29, you would do $543-30=513+1 = 514$
543- 299 When subtracting 299 you would subtract 300 (1 more than 299) from the second number then add 1 because 300 is actually one more than 299. For 543-299, you would do $543-300=243 +1 = 244$.
5437- 3999 When subtracting 3999 you would subtract 4000 (1 more than 3999) from the second number then add 1 because 4000 is actually one more than 3999. For 5437-3999, you would do $5437-4000=1437+1= 1438$

Objective & Strategy	Concrete	Pictorial	Abstract
<p>To subtract numbers with up to 4 digits using a formal written method.</p>	<p>Use base 10 to make the number then regroup by exchanging a ten for ten ones, a hundred for ten tens or a thousands for ten hundreds where necessary so that you can subtract the smaller number.</p> <p>2754-1568=1186</p>  <p>Step 1: Make the larger number.</p>  <p>Step 2: Exchange 1 ten for 10 ones.</p>  <p>Step 3: Subtract one hundred, 1 ten and 7 ones.</p>	<p>Children draw pictorial representations to show the regrouping in order to find the difference.</p> <p>2754 - 1568 = 1186</p> 	<p><u>Formal written method</u> Children use a condensed method of subtraction, including examples with multiples exchanges.</p> <p>2754 - 1568 = 1186</p> 

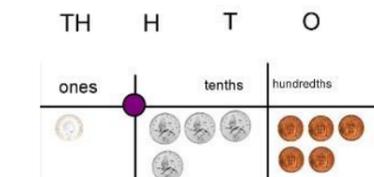

To subtract numbers with up to 4 digits using a formal written method, including decimals to two decimal places.

To subtract amounts of money to give change- adapted from year 3

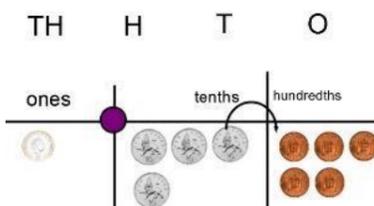

Use the place value counters to make the number = then regroup by exchanging, where necessary: a thousand for ten hundreds, a hundred for ten tens, a ten for ten ones, a one for ten tenths and ten tenths for a hundredth so that you can subtract.

£1.45-28p=£1.17

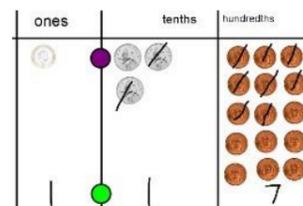

Step 1: Make the number

Step 2: Exchange
*because you can't subtract 8 from 5. Children will need to exchange 10p for 10x1p.

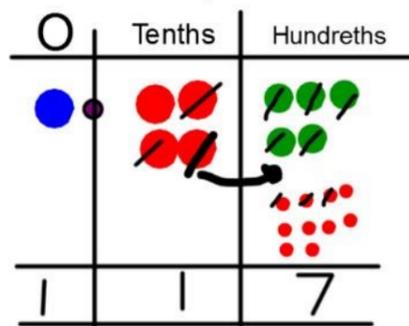

Step 3: Subtract to solve

Children draw pictorial representations to show the regrouping in order to find the difference.

£1.45-28p=£1.17

$1 + 0.10 + 0.07 = 1.17$

Formal written method

Children complete subtractions involving decimals which are presented in word problem format. They use zeros for place holders and know that decimal points should line up under each other.

Bella spends 28p in the shop. She spends £1.45 of her pocket money. How much change will she receive?

$$\begin{array}{r}
 \text{£}1.45 - 28\text{p} \\
 \text{£}1.\overset{3}{\cancel{4}}\overset{1}{5} \\
 - \quad \quad .28 \\
 \hline
 \text{£}1.17
 \end{array}$$

Year 5

subtract, take away, difference between, how many are left/ left over? How many are gone? One less, two less, ten less, hundred less. How many fewer is...than...? How much less is...? tens boundary, hundreds boundary, one boundary, tenths boundary, inverse, minuend, subtrahend, difference.

Counting Fluency: To count backwards and forwards in steps of 2s, 3s, 4s, 5s, 6s, 7s, 8s, 9s, 10s, 11s, 12s, 100s and 1000s from any given starting number.

Mental Strategies

Skill	Strategy
*Subtract a 4/5-digit multiple of 100.	<p>5400-3900 For large numbers use knowledge of place value to solve. For 5400-3900, make each number <u>100 times smaller</u> and do $54-39=15$ then make the solution <u>100 times bigger</u>. $15 \times 100 = 1500$ so $5400-3900=1500$.</p> <p>Or use the counting on method. For 5400-3900, start with 3900, add 100 to get to 4000 the another 1000 to get to 5000 then another 400 to get to 5400. Next recombine $100+1000+400= 1500$ so $5400-3900=1500$</p>
*Subtract near multiples of 10, 100, 1000, 10,000 then adjust, including crossing boundaries.	<p>2335-58 Subtract the nearest multiple of 10 (60) then <u>add 2</u> because 58 is two more than 60 $2335-60= 2275+2= 2277$</p> <p>2345-297 Subtract the nearest multiple of 100 (300) then <u>add 3</u> because 300 is three more than 297 $2345-300= 2045+3= 2048$</p> <p>5438- 3995 Add the nearest multiple of 1000 (4000) then <u>add 5</u> because 4000 is five more than 3995 $5438-4000= 1438+5= 1443$</p>
*Subtract tenths from a 1-digit whole number and tenths.	<p>5.7-0.4 If the tenths in the second number (subtrahend) are smaller than the tenths in the first number (minuend) then subtract the tenths and ones separately $5.7 - 0.4= 5.3$</p> <p>6.5-0.7 If the tenths in the second number (subtrahend) are larger than the tenths in the first number (minuend) then use your knowledge of number bonds to partition. For $6.5- 0.7$, partition 0.7 into <u>0.5</u> and <u>0.2</u>. Then subtract <u>0.5</u> from 6.5 to get 6 then subtract <u>0.2</u> = 5.8 so $6.5-0.7= 5.8$</p>

*Subtract two 1-digit whole numbers and tenths.	<p>4.7- 2.5 If the ones and tenths in the second number (subtrahend) are smaller than the ones and tenths in the first number (minuend) then subtract the tenths and ones separately. For 4.7-2.5, subtract the ones $4-2=2$ and then the tenths $0.7-0.5=0.2$ then recombine. $4.7-2.5=2.2$</p> <p>6.4 - 3.7 If the tenths in the second number (subtrahend) are larger than the tenths in the first number (minuend) use your knowledge of place value to solve. Make both numbers <u>ten times bigger</u> then calculate $64-37=27$. To adjust make your answer <u>10 times smaller</u> $27 \div 10 = 2.7$ so $6.4-3.7=2.7$</p>
*Subtract 2-digit numbers with tenths and hundredths.	<p>0.46-0.23 If the ones, tenths and hundredths in the second number (subtrahend) are smaller than the ones and tenths in the first number (minuend) then subtract the hundredths, tenths and ones separately. For 0.46-0.23 subtract the ones $0-0=0$, subtract the tenths $0.4-0.2=0.2$ then subtract the hundredths $0.06-0.03=0.03$ then recombine $0+0.2+0.03=0.23$</p> <p>0.76-0.59 If the tenths/ hundredths in the second number (subtrahend) are larger than the tenths/ hundredths in the first number (minuend) use your knowledge of place value to solve. Make both numbers <u>100 times bigger</u> then calculate $76-59=17$ To adjust make your answer <u>100 times smaller</u> $17 \div 100 = 0.17$ so $0.76-0.59=0.17$</p>
*Subtract a 1-digit whole number and tenths from a whole number.	<p>8-5.6 Use the counting on method to find the difference. If I start with 5.6 and <u>add 0.4</u>, I get to 6 then I need to <u>add 2</u> more to get to 8. I then recombine 0.4 and 2 so $8-5.6=2.4$</p>

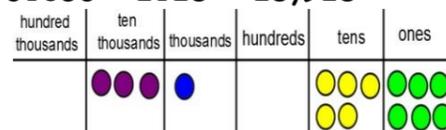

Year 5 Calculation Methods

Objective & Strategy	Concrete	Pictorial	Abstract
----------------------	----------	-----------	----------

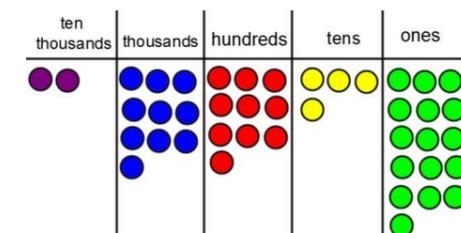

To subtract numbers with more than 4 digits.

Use the place value counters to make the number (minuend) then regroup by exchanging, where necessary: a thousand for ten hundreds, a hundred for ten tens, a ten for ten ones, a one for ten tenths and ten tenths for a hundredth so that you can subtract.

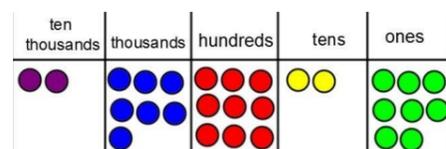

$$31056 - 2128 = 28,928$$

Step 1- Make the number.

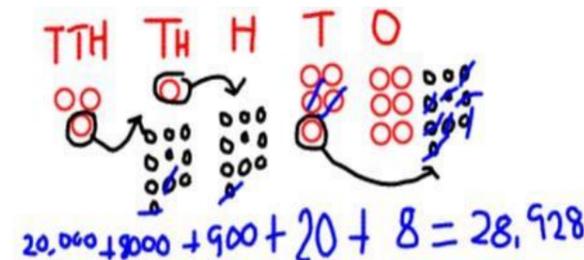

Step 2- Exchange.

Step 3- Subtract to solve.

Children draw pictorial representations to show the regrouping in order to find how many are left.

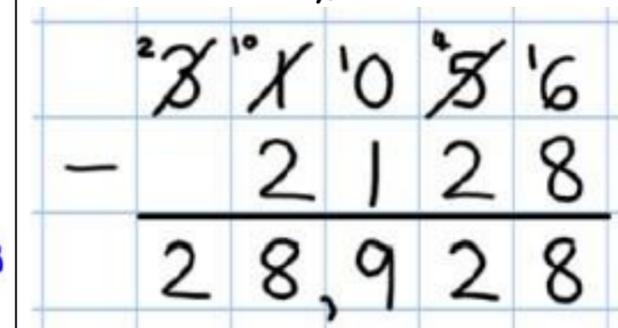

$$31056 - 2128 = 28,928$$

Formal written method

Children use a condensed method of subtraction including those with different numbers of digits.

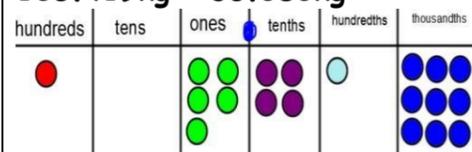

$$31056 - 2128 = 28,928$$

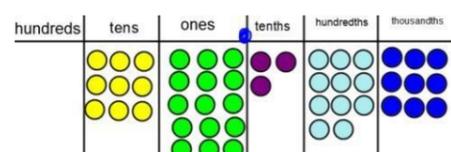

To solve problems involving measure using decimal notation up to three decimal places.

Use the place value counters to make the number then regroup by exchanging, where necessary: a thousand for ten hundreds, a hundred for ten tens, a ten for ten ones, a one for ten tenths, a hundredths for ten tenths and a thousandth for ten hundredths.

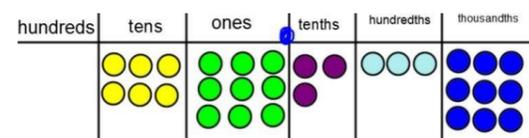

$$105.419\text{kg} - 36.080\text{kg}$$

Step one- Make the number.

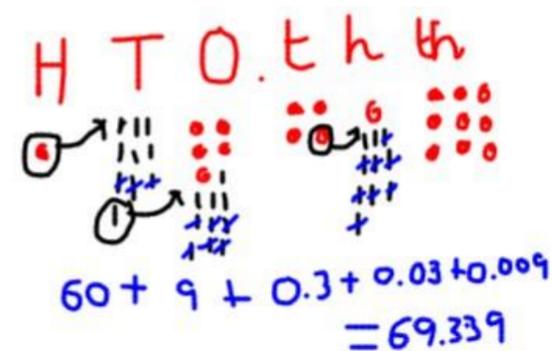

Step 2- Exchange.

Step 3- Subtract to solve.

Children draw pictorial representations to show the regrouping in order to find the difference.

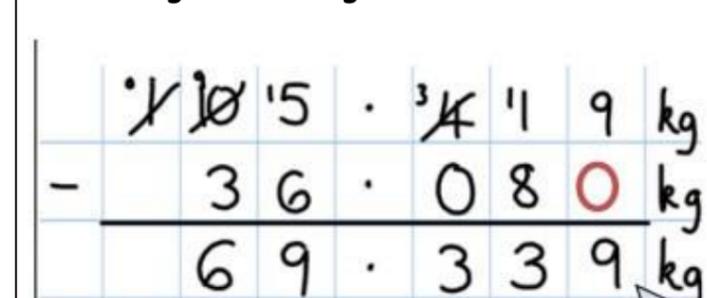

$$105.419\text{kg} - 36.080\text{kg}$$

Formal written method

Children complete subtractions involving decimals which are presented in word problem format. They use zeros for place holders and know that decimal points should line up under each other.

$$105.419\text{kg} - 36.080\text{kg}$$

is...? tens boundary, hundreds boundary, one boundary, tenths boundary, inverse, minuend, subtrahend, difference.

Counting Fluency: To consolidate counting backwards and forwards in steps of 2s, 3s, 4s, 5s, 6s, 7s, 8s, 9s, 10s, 11s, 12s, 100s, 1000s and 10,000s from any starting number. **Mental Strategies**

Skill	Strategy
Reconsolidate all strategies from Y4 and 5.	
*Subtract large numbers.	53,765-3330 For large numbers use partitioning to solve. For 53,765-3330, partition the subtrahend into 3000 and 300 and 30 and subtract each part. $53,765-3000=50,765$ then subtract 300 = 50,465 the subtract 30= 50,435
*Subtract near multiples of 0.01, 0.1, 10, 100, 1000 then adjust, including crossing boundaries.	6.7 - 3.8 Subtract the nearest whole number (4) then <u>add 0.2</u> because 4 is actually 0.2 more than 3.8 so $6.7 - 4 = 2.7 + 0.2 = 2.9$ 4.92- 2.96 Subtract the nearest whole number (3) then <u>add 0.04</u> because 3 is actually 0.04 more than 2.96 so $4.92-3 = 1.92+0.04 = 1.96$
*Subtract decimals with different numbers of places.	0.45-0.3 Subtract by partitioning using your knowledge of place value. First subtract the ones $0 - 0 = 0$, then the tenths $0.4 - 0.3 = 0.1$ then the hundredths $0.05-0.00=0.05$ Then recombine $0 + 0.1 + 0.05 = 0.15$ or use knowledge of place value to solve. Make each number <u>100 times bigger</u> and subtract. $45-30=15$ then make the solution <u>100 times smaller</u> . $15 \div 100 = 0.15$ so $0.45-0.3=0.15$
*Subtract any number with up to three decimal places from a whole number.	4-0.34 Use the counting on method and knowledge of place value to find the difference. If I start with 0.34 and <u>add 0.66</u> , I get to 1 then I need to <u>add 3</u> more to get to 4. I then recombine 0.66 and 3 so $4-0.34=3.66$ 14-0.432 Use the counting on method and knowledge of place value to find the difference. If I start with 0.432 and <u>add 0.568</u> , I get to 1 then need to <u>add 13</u> more to get to 14. I then recombine 0.568 and 13 so $14-0.432=13.568$

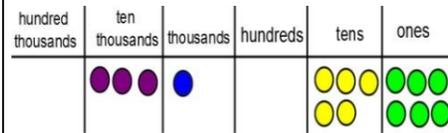

Year 6 Calculation Methods

Objective & Strategy	Concrete	Pictorial	Abstract
----------------------	----------	-----------	----------

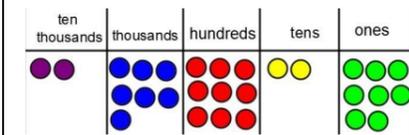

To subtract numbers with increasingly large and complex numbers.

Use the place value counters to make the number (minuend) then regroup by exchanging, where necessary: a thousand for ten hundreds, a hundred for ten tens, a ten for ten ones, a one for ten tenths and ten tenths for a hundredth so that you can subtract.

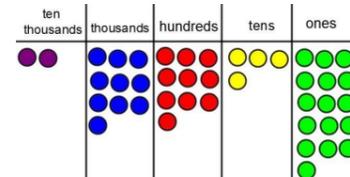

$$31056 - 2128 = 28,928$$

Step 1- Make the number

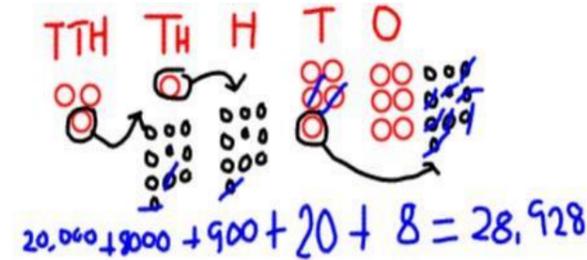

Step 3- Subtract to solve.

Step 2- Exchange.

Children draw pictorial representations to show the regrouping in order to find how many are left.

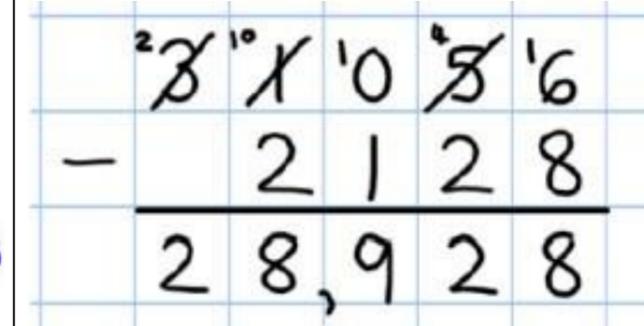

$$31056 - 2128 = 28,928$$

Formal written method

Children use a condensed method of subtraction including those with different numbers of digits.

$$31056 - 2128 = 28,928$$

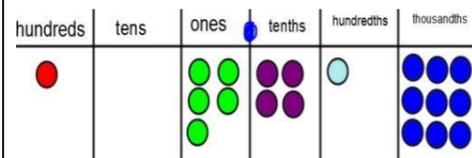

To solve problems involving the conversion of units of measure, using decimal notation up to 3 decimal places.

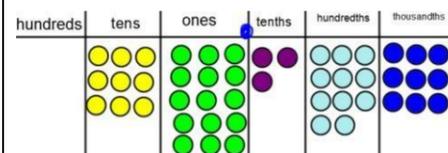

Use the place value counters to make the number then regroup by exchanging, where necessary: a thousand for ten hundreds, a hundred for ten tens, a ten for ten ones, a one for ten tenths, a hundredths for ten tenths and a thousandth for ten hundredths.

105.419 kg - 36080g As this is a mixed measure problem, children would first convert so they are working with the same unit.

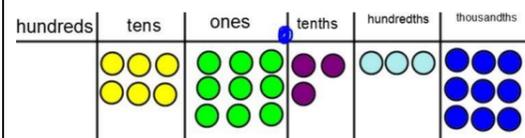

$$105.419\text{kg} - 36.080\text{kg}$$

Step one- Make the number.

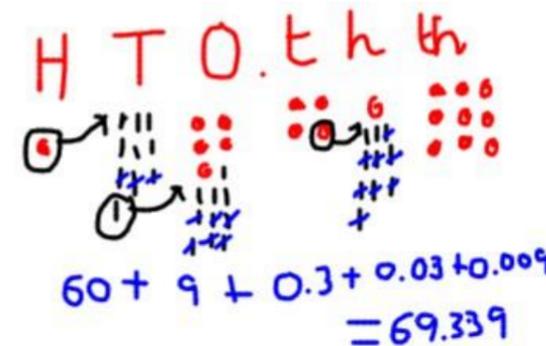

Step 2- Exchange.

Step 3- Subtract to solve.

Children draw pictorial representations to show the regrouping in order to find the difference.

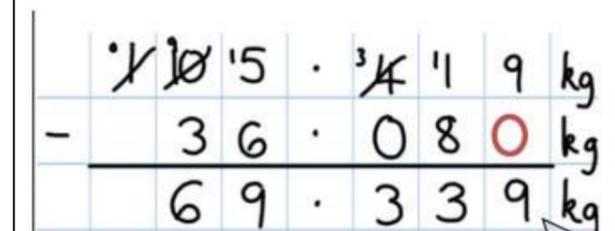

$$105.419\text{kg} - 36.080\text{kg}$$

Formal written method

Children complete subtractions involving decimals which are presented in word problem format. They use zeros for place holders and know that decimal points should line up under each other. They convert measures so that they are working with the same unit.

$$105.419\text{ kg} - 36080\text{g would convert into } 105.419\text{kg} - 36.080\text{kg}$$

St Luke's CE Primary School Calculation Policy- Subtraction
